

Smart Review®

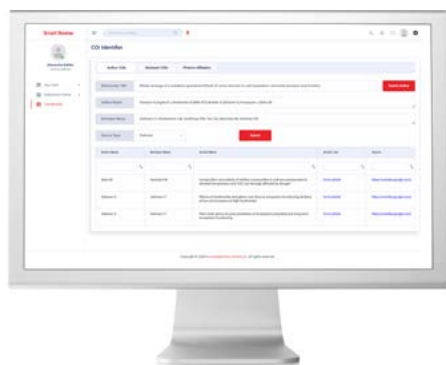

Part of the **KGL Smart Suite®** publishing platform, Smart Review uses intelligent automation to power the peer review process and rapidly publish your journal content to the highest standards of quality, diligence, and impact. Your editor, reviewer, and author stakeholders benefit from transparent oversight of editorial office tasks, quick turnaround times, and assurance of research integrity.

KGL's Application for Automating and Managing Peer Review Workflows Including Best-in-Class Research Integrity

Submission Check Automation

Integrating via API with submission systems including **Editorial Manager®** (EM) and **ScholarOne Manuscripts**, Smart Review directly accepts articles into a comprehensive peer review workflow that strengthens the administration, accuracy, speed, and integrity of journal peer review in a single efficient, user-friendly platform. The system implements automated checks guided by human supervision, including figure and table labeling and citation, reference format, ethical disclosures, author list verification and more.

Enhanced Research Integrity

Supplementing long-standing checks such as **iThenticate**, additional research integrity checks are now performed via third-party integrations with **Clear Skies' Papermill Alarm** and **DataSeer's SnapShot** tool. Papermill Alarm, the world's leading tool for detecting research misconduct across all areas of science, uses AI, LLMs, and network analysis to find signals consistent with organized research fraud. DataSeer's AI technology helps ensure complete and best-practice data availability, allowing publishers to monitor compliance with funder and institution open data mandates.

Peer Dash Reporting

Smart Review's peer review dashboard helps to ensure speed and quality in peer review by integrating live queue data across all submission sites within a portfolio, providing at-a-glance oversight of workflows across multiple journals as well as intuitive, innovative reports to monitor journal and editorial board performance. Peer Dash also provides turnaround-time tracking of peer review tasks, delivering continuous KPI reporting and enabling stakeholders to monitor the success of process improvements over time.
