

KGL SMART PUBLISH

Smart Submission™

Easier for authors. Faster to publication.

An AI-assisted submission intelligence platform that guides authors through submission requirements, validating manuscript information and identifying issues before a manuscript enters the editorial workflow — while extracting metadata and converting files to XML upfront for speedier publication.

A guided, author-friendly submission experience

BETTER AUTHOR EXPERIENCE

VALIDATED METADATA UPFRONT

SPEEDIER PUBLICATION

Fewer errors and return requests

Authors receive point-of-submission instructions and resolve issues as they go, spending less time re-entering information or correcting avoidable problems.

More complete submissions

Publishers receive more complete, consistent, and publication-ready submissions, reducing administrative work and supporting peer review.

A head start on production

Metadata is extracted and manuscript files converted to XML upfront, so nothing is re-keyed after acceptance and publication moves faster.

HOW SMART SUBMISSION FITS YOUR WORKFLOW

Complements the manuscript management system you already run.

01

Authors are guided through submission requirements in real time, with no repeated data entry.

02

Manuscript information is validated, issues are identified, and metadata and files are converted to XML upfront.

03

The validated submission passes into your existing manuscript management system — no migration required.

04

Editorial teams spend less time resolving missing information and move manuscripts more quickly through review.

AUTHORS

Point-of-submission guidance, fewer errors, and fewer return requests.

EDITORS

Less time resolving missing information and formatting inconsistencies.

PRODUCTION

XML and metadata delivered upfront mean consistent workflows and less rework.

PUBLISHERS

Trusted metadata and structured content to move manuscripts efficiently.
